

CAPABILITIES STATEMENT

Many of our services have been provided to Special Operation Forces in various locations throughout the world. Intelligence, Surveillance, and Reconnaissance (ISR) is our foundation, but our reach is extensive in the Intelligence Community. We have a rich experience in Full-Motion Video (FMV), Moving Target Indicators (MTI), Synthetic Aperture Radar (SAR), Technical Writing and Geospatial Intelligence. Our team has many hours as Processing, Exploitation, and Dissemination (PED) teams and Airborne Sensor Operators (ASO).

Our former instructors have spent many years leading FMV, ASO, and PED missions. During that time, we have also created, implemented, and executed training plans for those specific areas. Furthermore, we are able to provide ISR architecture solutions and support for aircraft or equipment set-up including turnkey solutions. Highly trained and extremely well versed in ISR operations, we can provide support at any step of your process, and from anywhere in the world.

As Subject Matter Experts (SME), we can provide professional expertise through our operational experience. We can give you personalized support for your requests while applying effective strategies in finding solutions. Your business success is our priority and we will give you the highest quality service. Our service is what you need to keep up with the rapidly evolving ISR community.
